IWG RECEIVES FAA CERTIFICATION FOR ITS CIRCULATING POTABLE WATER SYSTEM ON BOEING BUSINESS JET (737-700) AIRCRAFT

April 20, 2005

Burnaby, BC, Canada - International Water-Guard Industries Inc. (IWG) is pleased to announce that it has received a Supplemental Type Certificate (STC) from the U.S. Federal Aviation Administration for the installation of its patented Circulating Potable Water System (C-PWS™) on Boeing BBJ aircraft.

"This development fits well with both our corporate aviation and airline initiatives," said David Fox, IWG's President and CEO. "FAA certification for a 737 variant like the BBJ is very significant, since there are more 737's flying than any other jetliner type. With both Transport Canada and FAA certification we can now offer 737 operators our flight certified water treatment units as a stand-alone solution, or as part of a complete, certified circulating potable water system."

The C-PWS™ replaces the original potable water system and provides a pump-pressurized, continually circulating water flow that prevents freezing without electrical water line heaters, provides uniform water pressure in all flight conditions, and opens up interior space while offering 120 US Gallons of water. The light weight C-PWS™ also reduces maintenance requirements and includes IWG's water treatment units to destroy potentially harmful bacteria or viruses, and provide clean, fresh water to all points of use.

IWG received a Transport Canada STC for the C-PWS™ on BBJ aircraft in 2004, and the patented water system has also been installed on Airbus A310, Bombardier Global Express and Gulfstream GIV business jets.

International Water-Guard Industries Inc. is a Canadian aerospace company focusing on aircraft potable water treatment and full water system solutions. IWG has expertise in all aspects of water treatment, and has the products and know-how to provide high quality water for passengers and crew, as well as light weight, space saving solutions for the aircraft operator.
