IWG INTRODUCES ITS LATEST WATER TREATMENT UNIT AT NBAA – THE IWG-A6

October 7, 2008

Burnaby, BC, Canada - International Water-Guard Industries Inc. (IWG) made public today its latest intelligent aircraft water treatment unit, the all-new IWG-A6.

“The IWG-A6 is our second intelligent water treatment unit, following on from the IWG-A4 announced last year and now in production,” said IWG President & Chief Executive Officer David C. Fox. “The IWG-A6 and IWG-A4 are elements of our Smart Water System initiative. They both incorporate our new controller technology, but the A6 is suited for higher volume water systems, and incorporates a filter as well as ultraviolet disinfection,”

The IWG-A6 incorporates a new modular design, allowing many water system product configurations to be developed from common building blocks. It also has the enhanced self-monitoring capability available in all of IWG’s latest water treatment units. While ensuring that necessary ultraviolet light is produced to disinfect the aircraft’s water supplies, its self-monitoring system also scans for a range of fault conditions, which can be reported to a cabin management system through industry standard data protocols.

International Water-Guard is a Canadian aerospace company focusing on aircraft potable water treatment and full water system solutions. IWG has expertise in all aspects of water treatment, and has the products and know-how to provide high quality water for passengers and crew, and light weight, space saving solutions for the aircraft operator.
