## IWG COMPLETES DELIVERY OF BOEING BUSINESS JET CIRCULATING POTABLE WATER SYSTEM

2 October, 2007

Burnaby, BC, Canada - International Water-Guard Industries Inc. (IWG) is pleased to announce the completion and delivery of another order for its patented Circulating Potable Water System (C-PWS™) for a Boeing Business Jet (BBJ) aircraft. This is the second BBJ to have the C-PWS installed. IWG holds both a TCCA and FAA Supplemental Type Certificate for the BBJ installation.

The increasing capacity crunch for completions at the top end of the VIP airliner market is being reported throughout the industry. IWG is helping alleviate some of this pressure by providing its certified water systems and design expertise to completion centers and customers worldwide, said David Fox, IWG's President and CEO. IWG completed this project on time, specification and budget, he added.

The C-PWS replaces air-pressurization within the water system with continual circulation of the water by special aviation water pumps. This not only minimizes weight, but provides protection from freezing without electrical water line heaters. The C-PWS also includes IWG's Water Treatment Units to eliminate the threat from harmful bacteria and viruses.

International Water-Guard is a Canadian aerospace company focusing on aircraft potable water treatment and full water system solutions. IWG has expertise in all aspects of water treatment, and has the products and know-how to provide high quality water for passengers and crew, and light weight, space saving solutions for the aircraft operator.
