Water-Guard

The heat is on – IWG-HE Series, upgrade to unparalleled reliability.

The IWG-HE 'High Efficiency' Lavatory Water Heater Series is a family of ultra-reliable, low maintenance, weight-saving drop-in replacement water heaters that fit most VVIP and Business Jet aircraft. The HE Heaters also have PMA status for many Airbus and Boeing platforms.

The HE Heater is up to 0.5 lbs lighter than the heaters it replaces and features unique new technologies that not only improve performance, but also reduce scale build-up in the heater chamber which significantly enhances reliability.

Superior construction methods and materials that prevent corrosion and associated leaking, along with advanced safety features, make unplanned removals and Service Difficulty Reports a thing of the past.

Benefiting from an integrated thermal mixing valve, the water in the chamber can be heated to higher temperatures that greatly reduce potential bacterial growth making the water more hygienic for the end-user.

Backed by IWG's outstanding customer support, the IWG-HE Lavatory Water Heater is the ideal choice for your next VVIP completion or to upgrade existing heaters during refurbishment or maintenance.

Out with the old, in with the new – upgrade and experience the benefits of the IWG-HE Heater Series.
