Safe, clean water at every point of use no matter where your aircraft flies in the world - the power of Ultraviolet disinfection.

The IWG-UVL1 is the latest innovation in on-board water disinfection and utilizes state of the art LEDs to generate the UV light required to kill potential pathogens in water that can make passengers ill.

The use of LEDs results in the UVL1 being a very compact, lightweight and powerful unit providing NSF Class A water disinfection between 0.5 and 1 gpm (3.8 lpm)

Its small footprint means the UVL1 is easy to integrate next to water points of use such as faucets and spigots.

Intelligent control optimizes performance & efficiency and maximise lamp life – fit and forget.

Backed by IWG's outstanding customer support, the IWG-UVL1 is the perfect choice to add protection to your Business Jet or next VVIP completion or refurbishment.

The IWG-UVL1 – stay healthy!
