IWG RECEIVES ORDER FOR POTABLE WATER SYSTEM UPGRADES ON FLEET OF FIVE AIRBUS AIRCRAFT

March 26, 2003

Burnaby, BC, Canada - International Water-Guard Industries Inc. (IWG) is pleased to announce that it has received a Purchase Order from Air Canada Technical Services for five Circulating Potable Water System (C-PWS™) modification 'kits'. The kits are to be installed by Air Canada Technical Services on one of their Third Party maintenance customer's fleet of Airbus aircraft. The order is IWG's first multi ship-set sale of its patented Circulating Potable Water System. No value for the order was released.

IWG will supply Air Canada Technical Services with all required C-PWS™ components, documentation, and engineering data in kit form. The installation work will be performed at Air Canada's maintenance facility at Vancouver International Airport.

The modification will bring the five aircraft's potable water system up to the C-PWS™ standard by creating a continual circulation loop from the water tanks, through IWG's patented water treatment units, to the point of use, and back to the tank. Only fresh water circulates in the system, and is therefore repeatedly filtered and disinfected. Continual circulation also prevents freezing without the need for electrical water line heaters.

"This is an important development for us in many ways," said Bill Coote, IWG President and CEO. "Not only is it further validation of the value our circulating water system concept brings to aircraft operators, it's a new airliner type installation, and it's a perfect example of what we call Water Knowledge at work."

"We are pleased to be working with IWG in providing a solution to our customers requirements," said Roger Coe, Customer Service Manager for Air Canada Technical Services. "We were also pleased, and somewhat surprised, to find the solution not only here in Canada, but within a few miles of our Vancouver maintenance facility."

International Water-Guard Industries Inc. is a Canadian water treatment company providing total water treatment solutions to aviation, industrial/commercial, and residential customers throughout the world. Services include water treatment needs analysis, system design/assembly, and ongoing support. IWG has expertise in all aspects of water treatment, including advanced filtration, ultraviolet disinfection, reverse osmosis, deionization, etc.
