IWG RECEIVES BRAZILIAN PATENT ON ITS AIRCRAFT CIRCULATING WATER SYSTEM

May 21, 2008

Burnaby, BC, Canada - International Water-Guard Industries Inc. is pleased to announce that it has received a Brazilian Patent (PI 9914467-0) for its aircraft Circulating Potable Water System (C-PWS™).

“The issue of a Brazilian patent continues our strategy of protecting IWG intellectual property in the world’s major aerospace markets,” said David Fox, IWG’s president & CEO. “Brazil is now the world’s third largest aerospace producer, and we are a world leader in aircraft potable water innovation, so extending our patent protection to Brazil is a very logical step.”

IWG has had the C-PWS retrofitted on four aircraft types to date - the Boeing Business Jet (a 737-700 variant), Bombardier Global Express, Airbus A310, and Gulfstream G-IV. The latest BBJ system kit was delivered late last year and has now been installed.

Continual circulation prevents the water from freezing at high altitudes and does so while minimizing the electrical heaters required by traditional designs. It also replaces bulky pressurized water tanks with unpressurized tanks that are conformal to the shape of the aircraft, opening up space inside a crowded fuselage. IWG’s C-PWS also includes its ultraviolet water treatment units, which provide clean, disinfected water for passengers and crew. The result is a simple, light weight potable water system that incorporates its own 'water treatment plant.'

The C-PWS is also protected by Canadian Patent No. 2,345,995 and United States Patents No. 6,463,956 and No. 6,766,822.

International Water-Guard is a Canadian aerospace company focusing on aircraft potable water treatment and full water system solutions. IWG has expertise in all aspects of water treatment, and has the products and know-how to provide high quality water for passengers and crew, and light weight, space saving solutions for the aircraft operator.

On behalf of the Board of Directors
